EDUCATION

National University - Manila September 2026
Bachelor of Science in Information Technology - Mobile and Web Application

PROFESSIONAL EXPERIENCE

Web Developer Intern March 2026 - May 2026
National University - Manila

- Supported quality checks across 3 system projects, identifying and helping resolve 20+ UI bugs with a team of 3 developers.
- Used Qase to manage and maintain 50+ test cases, and used Git for version control and collaboration.
- Built 20+ responsive web pages using React.js and Tailwind CSS, checking implementation against Figma designs for visual accuracy and responsiveness.
- Assisted in documenting database references, issues, and development updates.

IT Admin & QA Intern December 2025 - February 2026
Ollopo Corporation

- Performed weekly functional and regression testing across 4 company websites to identify and document application issues.
- Reproduced and logged bugs with clear descriptions and testing results to support issue resolution.
- Maintained and updated property and room information across web platforms to ensure data accuracy and availability.
- Tested critical user flows, responsive layouts, links, forms, and website functionality across different scenarios.

PROJECTS

T-Global Elite Residences – Marketing Web & Management Platform with Mobile App
Full-stack Capstone Project | ReactJS, Tailwind CSS, JavaScript, Flutter, NodeJS

- Developed an interactive marketing web application featuring AR 3D room visualization, VR floorplan tours, an AI-powered chatbot, and real-time room availability tracking.
- Implemented a comprehensive admin portal using React and Chart.js to deliver predictive/descriptive analytics, automated inquiry management, and streamlined administrative workflows.
- Developed a cross-platform Flutter tenant mobile app integrated with Firebase for real-time maintenance reporting, facility reservations, and guest access management.

IoT-Enabled Wearable & AI Varicose Vein Monitoring – Medical Mobile App with ML Diagnostic Pipeline
Front-End Mobile & Python ML Implementation | Flutter, Python, TensorFlow, TFLite, Firebase

- Developed the front-end user interface and mobile application using Flutter and Dart for real-time varicose vein monitoring, image capture, and user diagnostic tracking.
- Implemented the Python deep learning pipeline using TensorFlow/Keras with MobileNetV3 to classify 7 CEAP clinical stages (C0–C6), achieving 83.48% test accuracy.
- Integrated the exported TensorFlow Lite (tflite_flutter) model into the Flutter front-end alongside Firebase Auth, Firestore, and Storage for seamless on-device inference and cloud synchronization.

Supremo Management System – Live Queueing App & Multi-Branch Queueing Management Platform
Front-End Web & Analytics Optimization | Next.js, ReactJS, Tailwind CSS, JavaScript, Firebase, Node.js

- Redesigned the live queueing application and admin dashboard with a modern, intuitive UI to streamline real-time customer queue tracking and multi-branch management workflows.
- Engineered simplified analytics dashboards and dynamic data visualizations to make complex revenue reports, service wait times, and peak-hour queue loads easy to understand.
- Integrated Firebase for live queue status updates, real-time ticket tracking, and multi-branch performance analytics.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, Python, PHP
Frameworks & Libraries: React.js, Next.js, Vue.js, Node.js, Laravel, Flutter, Tailwind CSS
Databases & Cloud: MySQL, PostgreSQL, Firebase
QA & Testing: Functional Testing, Bug Identification, Test Case Management, UI/Usability Checks, Issue Documentation
Development Tools: Qase, Git, GitHub, VS Code, Figma
APIs: REST APIs
